Wild Rocket

Botanical Name:
Diplotaxis tenuifolia

Family:
Brassicaceae

Native Range:
Mediterranean

Description

Wild Rocket is a short lived perennial leafy vegetable with thin, lance shaped, bright to dark green leaves, which are deeply lobed. Young leaves may be 6-8cm long, while the mature leaves reach 16-20cm long. The leaves form a dense rosette at the base of 50-branching stems, which may reach 80cm high. The thin stems are almost succulent and are both leafless and hairless. This plant has a long tap root and, bright yellow flowers, with four petals, appear from spring to summer. It may spread by both seed or by the branching tap root.

Site & Soil

- light shade
- poor well drained soil

Propagation

- seed in spring and autumn

Pests & Diseases

- slugs
- snails
- flea beetles

Uses

- a digestive stimulant
- high in sulphur for healthy skin, hair and nails

Thank You!

Our special thanks goes to:

- The European Union for co-funding our first Erasmus+ Project.
- Léargas for their assistance and support in relation to Erasmus+.
- Eichendorff Gymnasium, Ettlingen, Germany for collaborating with us.
- The pupils, parents and staff of Midleton College for their continued support.
